DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-58 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-43 are directed to systems and methods comprising modules such as a control module, a state oscillator module, a parametric test equipment module and a test instrumentation module. The modules may be implemented as software (Specification page 4, lines 10-15). Since the modules are claimed without the computer readable medium necessary to realize the functionality, they are considered non-statutory functional descriptive material (See MPEP 2106). Claims 44-58 are directed to a machine-readable medium with instructions stored for controlling using the control module and other modules. The machine-readable medium is not necessarily a computer readable medium and therefore claims 44-58 are also considered non-statutory functional descriptive material.

Response to Arguments

3. Applicant's arguments with respect to claims 1-58 have been considered but are moot in view of the new ground(s) of rejection.
